

# FMEA

## Create FMEAs in Team Work – Worldwide and Easy

*Powered by e1ns Technology*

PLATO e1ns technology is one of the most efficient and effective FMEA software solutions on the market. Thanks to the systematic and practical implementation of the FMEA methodology with web technology and a high-performance database.

**Communication**   ▪   **Collaboration**   ▪   **System Model**   ▪   **Method Networking**   ▪   **Lessons Learned**

### PLATO e1ns – The Product Innovation Platform with Focus on Methods

PLATO e1ns is the web-based Product Innovation Platform for the optimal design of the product development process. It is characterized by its competence in development and quality methods. Standard methods can be individually adapted to the development process and the related forms. All data is automatically transferred to all required quality methods. Changes are continuously updated and responsible persons are actively informed.

# FMEA – Be connected

## Open and Integrated System Approach within the Product Development

e1ns allows all project teams access to current engineering information. In addition to their own work status, all team members can also see the influence of their decisions on other disciplines.

## Start FMEA via Link – Immediately & Without any Knowledge of Structures

FMEA measures are defined and assigned directly in the form. Responsible persons will be actively informed via the integrated notification system of e1ns. A link takes the user directly to the requested measure. This enables simple and fast processing – even without specialist FMEA knowledge.

## Simple Handling via Web Browser

All team members work location independent on the FMEA.  
Each team has an overview at every stage of the development process.

## Beyond FMEA

by PLATO e1ns Technology

According to VDA/AIAG Guidelines
