

Managing Documents in the Development Process

Central document management with e1ns.documents plays an important role in ensuring consistent documentation in all phases of the product development process. Centralized storage and administration of all documents, files, and links in PLATO e1ns ensures the transparency and availability of all information. In addition, full-text indexing makes sure that all important documents can be found using the PLATO e1ns search function.

The linking of documents to the product and system development process makes e1ns.documents a primary storage system in the product development process. The software centralizes and standardizes the storage of all documents and files in the product development process

The screenshot shows the PLATO e1ns.documents interface. On the left is a 'Project and structure tree' showing a hierarchical view of a project. The main area is a 'Document list' table with columns for Title, Version, Editor, Modification date, and Size. On the right is a 'Preview' pane showing details for a selected document, including file name, code, version, status, and creation/modification dates. A 'Drop zone for quickly storing files and documents' is visible at the bottom center.

To get a quick overview, it is possible to see all subelements when needed

Preview of the documents

e1ns.documents offers:

- A central storage location for documents, files, and links
- A quick and simple way to find documents using the PLATO e1ns search function
- A combined view containing:
 - Project, milestones, actions
 - System development (product and system view), requirements, and functions
- Consistent documentation in all phases of the product development process

Your Benefits

- Storing and displaying the documents in the central project and structure tree allows for a uniform view of the project and product (as well as of the system).
- The use of a standard system representation enables and promotes cooperation throughout the company.
- Support for different types of documents such as files, external links, text, method forms (as PDFs) enables management of all relevant documents and files in the product development process.

Your Advantages

Easy to use:

- Simple, intuitive operation in a web browser.
- Files are simply dragged to the drop zone to store them there.
- Project members get oriented using a main view of the project, milestones, actions, and system structures. Depending on the task to be performed, it is therefore easy to find and use the specifications (technical/functional specification), risk or hazard analysis, DVP&R, etc.

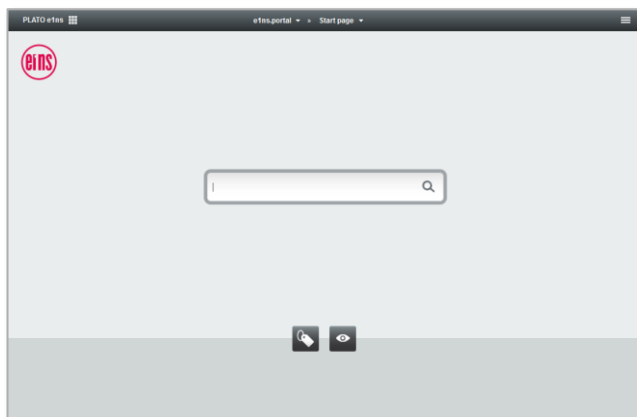

Management of documents:

- Audit trail for traceability
- Versioning and status
- Comment function
- Ability to link documents
- Electronic signature

Documentation of the product development process:

- Storage and availability in the central project view incl. the structure tree (project and system view).
- Storage of different types of documents such as records, files, external links, text, method forms (PDF).

Central Search Portal

The central search portal of PLATO e1ns acts as a "single point of information" to answer all your questions regarding projects, key figures, products, and risks. Content and metadata can be found immediately using the full-text search.
